

skinix®

Exclusive tape for scar care

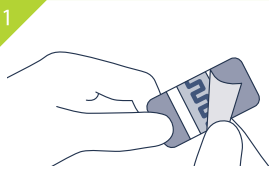

ATLESS-CARE

The shrinking force of the stretched tape strengthens the approaching force of skins to the scar★.

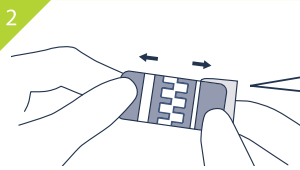

How to apply

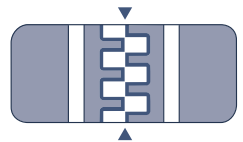

*Use with caution to avoid irritating to the scar★

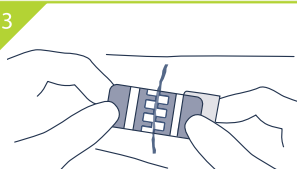

Partially remove the white paper backing (larger piece).

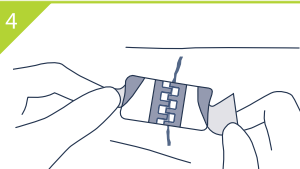

Return the tape to the front and pull the release liner on the left and right with both hands.

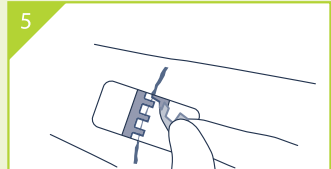

Pull the release liner little by little to adjust the left and right convex cut edges.

Align the central part with the scar and apply firmly while pulling.

Remove the white paper backing and apply the entire tape, pressing firmly from above.

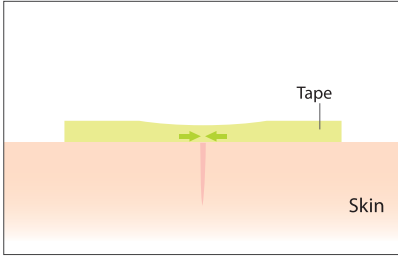

Remove the liner and smooth the tape against the skin.

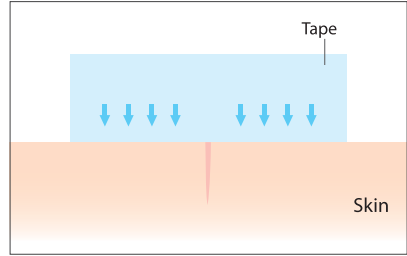

For M size, the application method is different. Please see How to apply in the user instructions carefully prior to use.

ATLESS - CARE accomplishes a revolutionary scar care solution by adding restoring force to skin

With ATLESS-CARE

With ordinary film dressing

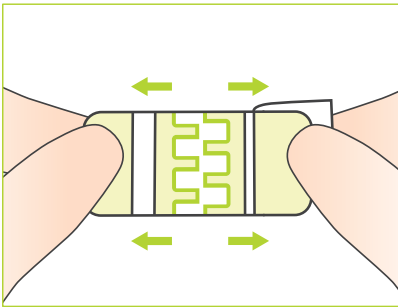

FEATURE

1

Pinpoint care structure that maximizes the restorative power of the tape

Our one-of-a-kind structure makes the central part of the tape uniformly elastic (*under patent application), and it allows the approaching force to be uniformly added to the skin where scar is present.

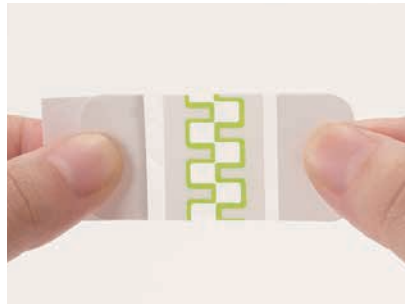

FEATURE

2

Professional treatment by only application just applying ATLESS-CARE.

Simply apply the central part of the tape to the scar after pulling and stretching the tape by using uneven lines at the central part of the tape as an indicator.

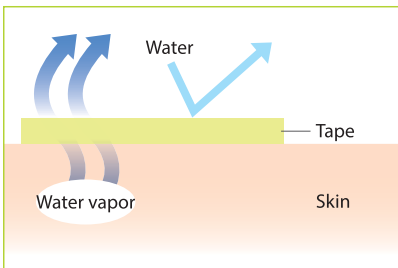

FEATURE

3

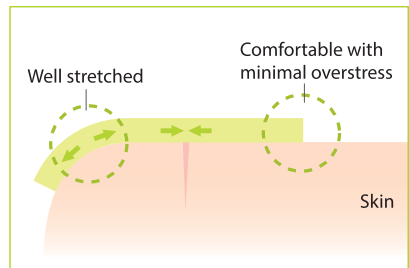

Always comfort when apply the tape

ATLESS-CARE provides more comfortable, scar care for long time by reducing skin stress such as sticky and sweaty feel (minimize stress for skin) and overstressed skin.

A sense of "ZERO Feel" feel* with an ultrathin, 7-micron film

Pinpoint treatment does not make overstress for skin

Scar treatment procedure, which has been given up by the patient, is greatly improved, and the patient's anxiety and stress are thus reduced.
